Friends Center  
IMC Construction  
Johnson & Johnson  
Liberty Property Trust  
McNeil Consumer & Specialty Pharmaceuticals  
Millville Senior Housing  
Penn Medicine  
Overbrook School for the Blind  
Re:Vision Architecture  
SAP America  
Synterra Partners  
Tastybaking Company  
University of Scranton  
University Science Center  
Villanova University  
William Penn Charter School  
XL Insurance

## COMMISSIONING EXPERIENCE

---

“Green” building design has rapidly emerged from a novel practice to a driving force in the design and construction industry. The U.S. Green Building Council’s LEED rating system is the most widely accepted manner to provide certification for a green building. To obtain engineering related credits and prerequisites, a thorough knowledge and understanding of sustainable design standards and guidelines is required. Bala has been engineering and commissioning these projects for over 15 years. With extensive experience in sustainable design, and many LEED Accredited Professionals on staff, Bala is committed to designing proven, energy efficient and reliable engineering systems, and providing thorough commissioning services for green building design. Bala’s expertise enhances all types of projects, from new greenfield site building to retrofits. Bala’s commissioning team is an independent group of professionals that provides LEED commissioning services for projects engineered by other design firms, as well as Bala Projects. As a requirement for almost every certification level, commissioning is critical to the success of LEED projects.

## PROJECT TYPES

---

Energy Modeling	Sustainable Design Commissioning
LEED Basis of Design	Fundamental Commissioning
LEED Engineering Design	Enhanced Commissioning
Energy Star Certification	Retro-Commissioning
